Summary

Computer Science and Business Systems undergraduate at SASTRA Deemed University (9.06 CGPA) with research experience at NITK. Experienced owning end-to-end product workflows – mapping how systems and APIs fit together, writing specs with clear flows, edge cases and acceptance criteria, and validating what ships through structured, data-backed testing. Comfortable with SQL and analytics tools, communicates well across engineers and non-engineers, and is hands-on with AI while staying critical of where it is unreliable.

Education

SASTRA Deemed University <i>B.Tech in Computer Science and Business Systems — CGPA: 9.06</i>	2023 – 2027
Narayana Junior College <i>Higher Secondary Education — Percentage: 98.6%</i>	2021 – 2023

Experience

National Institute of Technology Karnataka (NITK), Surathkal <i>Research Intern</i>	Dec 2025 – Mar 2026
---	---------------------

- Broke down an open-ended, ambiguous research problem in automated software evolution into structured parts, prioritized what mattered first, and shipped a working multimodal prototype.
- Owned the Food Intelligence System end to end: evaluated alternative approaches, pulled data to find failure cases, and iterated the design based on evidence rather than assumption.
- Acted as the point of contact with Prof. K. Chandrasekaran (HAG), turning open feedback into concrete next steps and driving the work from problem definition through to a working, tested prototype.

Projects

PrepAI – GenAI Interview Preparation & Resume Analysis Platform	GitHub
--	--------

- Identified the problem of fragmented interview preparation and owned the product end to end – from user flows and feature requirements through to a shipped solution converting resumes and job descriptions into skill-gap analysis and personalized preparation insights.
- Wrote specs people could build from: flows, edge cases, states and acceptance criteria for resume analysis, skill-gap identification, report generation, and progress tracking.
- Mapped how the frontend, REST APIs, backend services, database, and authentication layers needed to fit together, and what should happen when a request or integration failed.
- Built and integrated REST API endpoints for authentication, user data management, and resume processing, with JWT-based access control governing protected resources and user-specific data.
- Translated user inputs into structured AI workflows that generate personalized interview questions and actionable recommendations, and checked outputs for reliability before trusting them.
- Walked every flow before release: tested API endpoints and end-to-end user journeys in Postman, investigated failure cases, and closed the loop with error handling rather than leaving edge cases unhandled.

CourseMate – AI-Powered RAG Book Assistant	GitHub
---	--------

- Designed a document question-answering product around the user need for reliable, context-aware answers from large PDF books.
- Mapped the end-to-end data flow across systems – upload and ingestion, text processing, retrieval, semantic search, and AI response generation – and defined what each stage was responsible for.
- Implemented Retrieval-Augmented Generation using LangChain and ChromaDB, integrating Mistral Large through a custom prompt pipeline.
- Designed the response workflow to ground AI outputs in retrieved document context, reducing hallucinations and improving reliability of what shipped.
- Pulled data on retrieval and response behavior myself, found where accuracy dropped off, and iterated the workflow based on that evidence.

Skills

Product Management: Product Thinking, Problem Definition, User Flows, Feature Requirements, Specs & Acceptance Criteria, Edge-Case Analysis, Stakeholder Communication, Structured Problem Solving, Prioritization, Product Analytics, Testing & Validation

Systems & API Integration: REST APIs, Third-Party API Integration, System Design Basics, Frontend-Backend Integration, Authentication & Access Control (JWT), Error Handling, Failure-Case Analysis

Data & Analytics: SQL, Oracle SQL, Power BI, Data Analysis, Data-Driven Decision Making

AI Product Development: Generative AI, Large Language Models, Retrieval-Augmented Generation (RAG), LangChain, ChromaDB, Prompt Engineering, AI Reliability & Evaluation

Programming: Python, Java, C, C++, Node.js, Express.js

Databases & Tools: Relational Databases, Git, Postman, HTML, CSS, DOM
